Personal Summary

Full-stack developer specializing in React.js and Node.js, with hands-on industry experience building an e-commerce platform end-toend — REST APIs, JWT authentication, and MySQL schema design. Built and debugged user-facing features as part of a 4-person engineering team, beyond academic coursework. Quick to learn new technologies and comfortable developing features across the API and UI layers

Skills

Programming: Python,JavaScript

Frontend: React.js, Tailwind CSS, HTML5/CSS3

Backend: Node.js, Express.js, RESTful API Design, JWT Authentication

Database: MySQL, SQL, Relational Schema Design

UI Design: Figma,Wordpress

Tools & Workflow: Git, GitHub, VS Code, Postman

Professional Experience

Full Stack Web Developer Intern, *Muthu Soft Labs Pvt Ltd* Aug 2025 – Dec 2025

- Built a full-stack online book-ordering platform using React.js, Tailwind CSS, Node.js, Express.js, and MySQL, covering the complete development lifecycle from wireframing to deployment.
- Designed and implemented 20+ REST API endpoints for authentication, cart, orders, addresses, wishlist, and order tracking.
- Implemented JWT-based authentication, bcryptjs password hashing, and protected API routes to secure user accounts and application resources.
- Developed responsive interfaces for book browsing, category filtering, product details, wishlist, and cart/checkout using reusable React components and Tailwind CSS.
- Designed relational MySQL database schemas and implemented CRUD operations for users, books, carts, and orders.
- Implemented a four-stage order tracking workflow (Placed → Processing → Shipped → Delivered) and tested API functionality using Postman, including authentication, invalid inputs, and order status updates.
- Collaborated in a 4-person development team using daily standups, Git-based version control, pull-request code reviews, and debugging to maintain application functionality.

Projects

Staff - Student Forum

- Developed a communication platform for the Mathematics Department at Anna University to manage timetables, staff availability, and event announcements.
- Built using HTML, CSS, JavaScript, PHP, and MySQL with XAMPP for local deployment. Ensured a user-friendly interface for both staff and students.
- Key features include dynamic timetable updates, real-time staff availability, and centralized event notifications.
- Designed based on feedback from faculty and students to meet department-specific coordination needs.

AI-Based Student Academic Assistant

- Developed an academic support platform that enables students to access **attendance, internal marks, timetable, and study materials** through a chatbot-based interface.
- Built the web application using **HTML, CSS, JavaScript, PHP, and MySQL**, with database-driven access to student and academic information.
- Implemented separate **student and administrator authentication**, allowing administrators to manage academic records while students securely access their own information.
- Integrated an **ESP32-CAM** for Wi-Fi-based camera monitoring, extending the project into a combined **web, AI, and IoT system**.
- Designed the system to reduce dependency on manual academic record checking and provide students with centralized access to academic information.

Education

M.Sc.Computer Science, *CEG,Anna University* Nov 2021 – May 2027
